CARD #5:

Consider the system of equations below:

$$y = -\frac{1}{2}x + 5$$

$$3x + 4y = 18$$

Ezra says the solution to the system is (6, 2).

Evelyn says the solution to the system is (-2, 6).

CARD #6:

Fred says the system shown on the graph has one solution.

Felicity says the system shown on the graph has no solution.

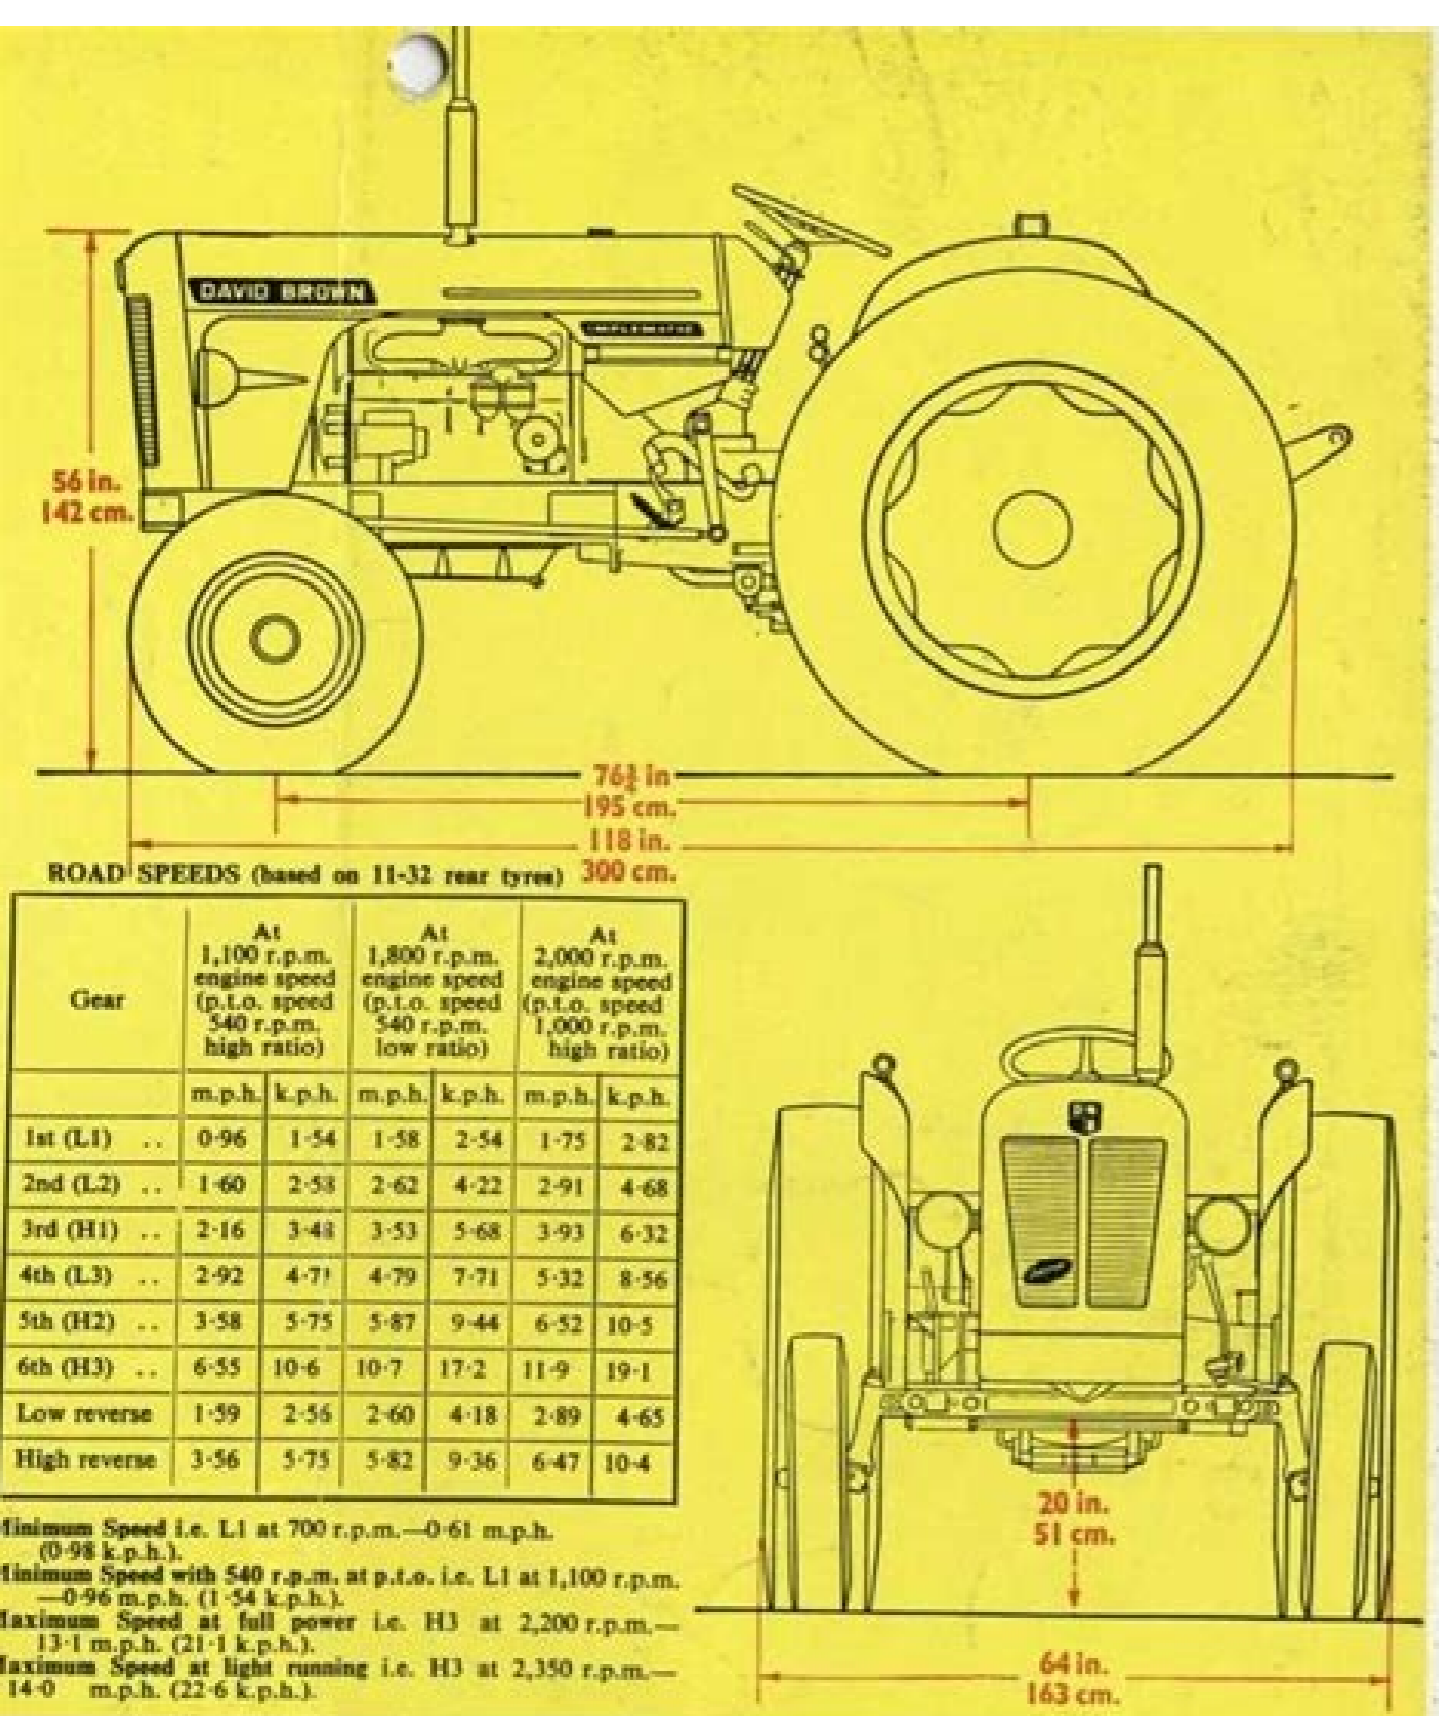

Test Prep Name: _____

©K. Schmitt, 2012

Today, I am sharing some tips for the task of mathematics and how I have used it in the past in several different schools. I'm a great defender of responsibility. UPDATE: I wrote more about the task agenda in this publication. This definitely depends on you choosing what is best for your students. Students should consult the results of a given survey to answer the 12 questions. Specifically, how I handled the missing work and how I calculated. I used my task schedule template to update dates and information, along with any class announcement. This activity focuses on the skills of applying the Pitagorean theorem to determine the unknown side types: centers of mathematics, activities, Minilessons Digital Download PDF (0.38 MB) Explore the the theorem pitagoreano This introductory activity of the theorem of Pythagorean allows students to understand and explain a model of the the theorem pythagorean. I also send a sample of a home in my parents Students will compare the measurement of the types: math centers, activities, digital download games of PDF games (0.42 MB) Drawing inferences for samples: Solve and color this drawing of sample inferences solve and color is an excellent way for students to practice Use of random sample data. On my Facebook page, I have shared some different views for the task: the task facing anything we want to succeed in requires practice. Students will solve problems and then mark their card to be the first to get four in the row. I am very aware that for high school, students are more alone and need to take responsibility for their tasks. As an adult I practice cooking, reading, blogging, doingteaching and raising of children. If you can train students to wait for the task, you have already worked to fight against the fight to complete it. Some teachers and even schools have renounced the idea of the task. There is always space for practice. practice. Is mathematical practice like any other sport? Why does the minimalist approach work for the task? The task is a way we practice; it keeps it fresh in our minds after a new lesson and helps us keep it in our memory, so we don't forget. It would circulate and initiate or seal the task agenda if it were complete. Parents knew what to look for and what was expected of their students. There is no task and a father's perspective. The papers! They used to be the ruin of my existence. Students should not have to think if they have the task or not, they should think about how much they have or what has been achieved. You just have to record qualifications (if you wish) once a week. I firmly believe that the vast majority (95%) of students want to meet expectations. Then they will place the answer and color the image accordingly. It's consistent and predictable. Students thrive in consistent and predictable environments. This activity is excellent for the construction of conceptual types: centers of mathematics, activities, minilessons Digital Download PDF (0.81 MB) Volume of cylinders: solve and color this volume of cylinders Solve and color consists of 16 problems where students must find the volume of each cylinder. The purpose of the agenda was three times: this eliminated the folly of paper and allowed me to pick it up only once a week. Then I give the same spiel for several weeks. Happy parents, happy teacher. Students receive a weekly work schedule and accompanying brochures. On Monday, the students received the Mathematical Tasks schedule with subsequent tasks attached. The students know what is expected of them every week. Communication is essential, it goes back to that famous saying: "It is not what you say, but how you say it!" At the beginning of the year, she would like to communicate o y .evalc se aicnetsinoc al euq etnememrif oerC .setnaidutse sol a omoc serdap sol a onat aerat al ed I'm not sure. ##### I don't know : : : I'm gonna go : Types: Math Centers, Activities, Minilessons Digital Download PDF (0.40 MB) Scatter Plots and Association: Card Sort This Scatter Plots and Association Card Sort is great for practicing identifying and comparing types of association between bivariate data. Each week I determined and prepped the assignments for the following week. The same process was repeated on Wednesday. A welcome respectful comments and questions in the comments. A I would aim to finish the lesson with 8-10 minutes of class, students would begin their assignment, and then whatever was not finished was to be completed by the following day. This activity Types: Lesson Plans (Individual), Activities, Fun Stuff Digital Download PDF (0.41 MB) Two-Way Tables: Guess My Table This Two-Way Tables Activity consists of 8 clue cards where students must analyze and construct two-way tables using the clues for each table. Students are able to investigate and apply concepts with this random sampling and inferences Types: Math Centers, Activities, Games Digital Download PDF (0.36 MB) A AAt this age, there are students who are involved in many extra-curricular things and they loved knowing the assignments and what to expect at the beginning of the week. Then, they will locate the answer and color Types: Math Centers, Activities, Games Digital Download PDF (1.02 MB) Populations and Samples: Card Sort This Populations and Samples Card Sort is great for practicing identifying and comparing populations and samples given 20 different scenarios. A Students will determine whether each card provided is a population or sample and paste them in the Types: Math Centers, Activities, Games Digital Download PDF (0.37 MB) Intro to Statistics: Class Sample Activity This Intro to Statistics Activity allows students to work collaboratively to better understand random samples and making inferences about a population. The next day, students were to have their homework agenda during the warm up. We work hard Monday through Thursday and then we take the weekend off.eAAA After a few weeks of being consistent, the moaning and groaning of homework dissipates. A Assign me up. I even worked at a school that attempted to standardize homework by assigning a different content area to each day of the week. Students will match the cylinder, cone or sphere to the correct formula and total volume. Want to try the Homework Agenda? A ADownload the template here, just type and go! I know this is a heated topic in education. Students will determine whether each graph or description provided has positive, negative or no association Types: Lesson Plans (Individual), Activities, Fun Stuff Digital Download PDF (0.38 MB) Constructing Scatter Plots: Investigation Activity This Constructing Scatter Plots Investigation Activity allows students to work collaboratively to better understand bivariate measurement data while investigating patterns of association.Students are able to practice constructing and investigating Types: Lesson Plans (Individual), Activities, Fun Stuff Digital Download PDF (0.44 MB) Scatter Plots and Trend Lines: Cut and Paste This Scatter Plots and Trend Lines Cut and Paste is a great way for students to practice writing equations of trend lines. A Students will use the scatter plots and trend lines provided to cut and paste the correct trend line equation. Students were well aware of the expectations for the week and could keep everything together. A However, there are students who need more support at home and whose parents are happy to help. How to Use the Homework Agenda? A AThen on Thursdays, my parent volunteer, would come in and copy the assignments. At this point, you could go over the homework, answer questions, grade it as a class, etc. Basketball practice, football practice, video games, drawing, theater, even babysitting requires practice.
